

Observation Note-Taking Form

Remember to capture:

- o What do you see and hear the teacher and students doing? *Quantify and quote.*
- o What evidence can you gather of student learning? *Actively collect evidence.*
- o What will students know and be able to do at the end of the lesson? *Search out evidence of rigor and new understandings from students.*

**Evidence of Student Outcomes**

*Examples of student outcome data can include: number of students who write down a correct answer, student responses to probing questions about the lesson objective, length and complexity of specific answers given by students, etc.*
